HOME AI GATEWAY

Your writing, on your phone.

Addie's setup sheet - connect your phone to the home Wi-Fi first.

Scan each code with your phone camera. If this PDF is already on your phone, tap the link below the code instead.

1. Install the certificate

Tap: download certificate

Download the file. In Android Settings, search "Install a certificate", choose "CA certificate", then select the downloaded file.

2. Create your account

Tap: private account setup

Choose a new gateway password of at least 12 characters. Your username is addie. Use a new password, separate from Google or Claude.

Open your writing workspace

After setup, bookmark https://192.168.68.71:8443 for everyday use.

When ready to switch from the laptop, finish and stop its Claude conversation first. Then select Addie - Writing on your phone and open "Saved on the laptop" to resume the right conversation.

Write normally to use Claude. Approve or decline changes when asked. Router opens a separate branch; returned information goes into an unsent draft for you to review.

Both laptops must stay powered, awake, and connected to Wi-Fi. Research and studio actions currently marked Mock are demonstrations.

Keep this sheet private: the account code is a one-use invitation. Chris's phone could use Claude, but its Chrome certificate warning is still being investigated. If your phone shows a warning too, tell Chris; do not repeat account setup.
